Dear Scientists and Trade Partners,

We have entered 2023-24 with new hopes and aspirations for our scientific community. The global scientific research market is projected to reach \$3.2 trillion this year, with a forecasted compound annual growth rate (CAGR) of about 5-6%. India along with the Asia Pacific region is expected to be the fastest-growing market due to increasing investments in life-sciences research, biotechnology & healthcare infrastructure.

One of the main drivers of growth in scientific research is the increasing demand for solutions to complex problems. Governments, private organizations and individuals are investing heavily in R&D to address issues such as climate change, disease, and energy efficiency. International collaborations and partnerships are blossoming like never before using advanced technologies & processing power.

As always, there exist challenges such as funding constraints, increasing competition for resources and geopolitical risks. Researchers must also navigate ever-increasing complexities of regulatory & ethical environments when conducting research.

Our Company operations are also expanding and so is our thirst for rapid growth. SRL has strengthened the brand in the European markets and participated in some of the world's largest trade shows like the Analytica (Munich, Germany), Achema (Frankfurt, Germany) and Medica (Dusseldorf, Germany), in addition to more than 50 conferences and seminars globally.

In our latest 2023-24 catalogue, we have launched our *Part L: Laboratory Accessories*, which carries our foray into high-quality porcelain-ware and plastic-ware for routine laboratory applications. These microcentrifuge tubes, spin columns, crucibles, buchner funnels, evaporating dishes and mortar & pestle are an extension to an already exhaustive product range. We have also introduced many specialized biochemicals, specialty reagents and biotechnology offerings all of which are found in this manual.

We thank all our customers and trade partners for their support, trust and loyalty in making brand SRL the gold standard and preferred choice in their laboratories.

Sodium Lauryl Sulphate

A highly versatile product for Drug Dissolution Testing, Quality Control, Research and Electrophoresis applications.

For Drug Dissolution Testing Studies

Sodium Lauryl Sulphate (Sodium Dodecyl Sulphate, SLS, SDS) is a strong component of the media used for Dissolution Testing in In Vitro methods for water-soluble and slightly-water-soluble drugs. It's importance as a simulated gastric/intestinal media ingredient makes it's quality a critical factor in the accuracy of results.

Principally used as a QC Test, Dissolution Testing, SDS of AR & High Purity grades are the most prevalent reagents in use due to constant production improvements, testing and stability studies. SRL is one of the first developers of the High Purity SLS (99.5%) which is fast-becoming the industry standard across the Pharma QC Testing, with many scientists now adopting the newer improved grade as a Protocol standard.

Our Premier Product, Sodium Lauryl Sulphate High Purity (99.5%) (35825) can,

- Eliminate further purification by the customer by foaming & other processes, demonstrate exceptionally lower lauryl alcohol (LA) impurities
- Improve testing accuracy and confirm lot-to-lot bioequivalence
- Ensure consistent and reliable results in In Vitro Testing and Intrinsic Dissolution Rate (IDR) studies
- Secure accurate Dissolution profiles (suitable to fast-release and slow-release drugs)
- Assist in detection of relevant product changes so as to ensure the quality and consistent performance of final products

For SDS Polyacrylamide Gel Electrophoresis (SDS-PAGE) Studies

Primarily used in the denaturing of proteins, Sodium Lauryl Sulphate of high purity and molecular biology grades play a critical role in PAGE electrophoresis techniques as well as SDS Gradient Gel Electrophoresis to,

- Unfold normally buried polypeptide chains while retaining their normal (native) structure
- Bind to difficult regions (hydrophobic regions) within the protein chains
- Induce a predominant negative charge for the subsequent electrophoresis
- Ensure a electrophoretic separation for a large number (and types) of proteins

Linkers & Cross-Linkers for Protein Chemistry

Cross-linking is the process of chemically joining two or more molecules by a covalent bond. **SRL** introduced linking and cross-linking reagents are important reagents used in protein chemistry applications. Typically, they are commonly used reagents to modify nucleic acids, drugs and solid surfaces. Areas of research where these products find application are bio-conjugation, immobilization, surface modification and bio-molecule labeling. These reagents contain reactive ends to specific functional groups, such as primary amines and sulfhydryls, on proteins or other molecules. The availability of several chemical groups in proteins and peptides make them targets for conjugation and for study using cross-linking methods. Some common applications of cross-linkers is for the identification of near-neighbor protein relationships and for ligand-receptor interactions.

- 3-(Acetamidomethylthio)propanoic Acid (MPA(Acm))
- 3-(Benzylthio)-Propionic Acid
- DABCYL-N-Succinimidyl Ester
- DHP Linker (3,4-Dihydro-2H-Pyran-2-Methanol)
- 5-(Ethylthio)-1H-Tetrazole (ETT)
- HMBA Linker (4-(Hydroxymethyl)benzoic Acid)
- HMPA Linker
- Ramage Linker
- Rink Amide Linker (Knorr Linker)
- Sieber Linker
- Weinreb Linker

Compounds for Peptide Synthesis

Peptide synthesis is characterized as the formation of a peptide bond between two amino acids. While the definition of a peptide is not definitive, it usually refers to chains of up to 30-50 amino acids. Peptide synthesis today is a common approach in even high-throughput biological research and product and drug development, although it is a technique about 100 years old. We offer various types of peptide reagents that can be used for biological production and research work.

Media for Gel Filtration and Affinity Chromatography

Gel Filtration (Molecular Sieving or Size Exclusion Chromatography) and Affinity Chromatography are rapidly becoming indispensable to biochemists and molecular biologists. Gel Filtration is used for the separation of macromolecules from smaller molecules, for fractionation of mixtures of various biopolymers on the basis of molecular size, for characterizing macromolecules and determining molecular weights and molar masses, for pathological screening of body fluids and for structure determination studies. Affinity Chromatography, besides being put to many of the above uses, is mainly employed for the isolation and purification of biologically active substances like enzymes, antibodies, antigens, lectins, viruses and toxins. Affinity Chromatography has the advantage of being rapid and highly selective.

Seralite Products

Ion Exchange Resins

Our important range of Seralite products is very critical for ion exchange applications. These are acidic/basic exchange resins consisting of different polymers and copolymers. The particle size of these resins is between 20 – 50 mesh and are excellent for cross-linking. Typical application of these resins are for water conditioning, softening and deionisation, removal of recovery of high molecular weight anions, fractional separation of organic acids, amino acids, metals, peptides, inorganic and rare earth metals. They can also be used for the treatment of sugar solutions, amino acids and enzymes. SRL Ion exchange resins are highly recommended products for critical separation work.

Product Name	Particle Size	Ion Exchange Capacity	pH Range	Ionoc Form
Seralite SRA-400	20 – 50 mesh BSS	3.0-3.5meq/g	0-14	Cl-
Seralite SRC-120	20 – 50 mesh BSS	min 4.5meq/g	0-14	H+
Seralite SRA-400	20 – 50 mesh BSS	min 10meq/g	5-14	H+

Our Seralite series is equivalent to the Amberlite series of the Rohm and Haas Company

BioLit® PCR Products (Taq Polymerase, Buffers & Kits)

BioLit® TAQ Polymerases

Taq DNA Polymerases (offered in different concentrations) are enzymes used in Routine PCR. They are thermostable recombinant DNA polymerases derived from thermophilic bacterium *Thermus aquaticus*. They can amplify DNA target up to 5 kb (simple template) and have a 5' to 3' polymerase activity but lack 3' to 5' exonuclease activity that result in a 3'-dA overhang PCR product.

BioLit® Routine PCR

Applications - PCR amplification of DNA fragments as long as 5 kb, DNA labeling, DNA sequencing, PCR for cloning.

Roseate Taq DNA Polymerase is a thermostable recombinant DNA polymerase derived from thermophilic bacterium *Thermus aquaticus*. Its molecular weight is 94 kDa. Taq DNA Polymerase can amplify DNA targets up to 5 kb (simple template). The elongation velocity is 0.9~1.2kb/min (70~75°C). It has 5' to 3' polymerase activity but lacks of 3' to 5' exonuclease activity that result ion a 3'-dA overhangs PCR product.

The buffer given is 10X Rosette PCR Buffer with Mg²⁺. This buffer has a roseate coloured dye enabling the researcher to load the sample directly after PCR into an agarose gel for electrophoresis.

Other different polymerases described below are useful when there is a need for higher specificity for primer incorporation, high fidelity with proof reading capability, amplifying long and complex templates & need for efficient and fast elongation, and DNA Polymerase which is suitable for Hot Start PCR. The polymerases here each have one of these features and can be chosen to suit the needs of the researcher.

BioLit® Hot Start PCR

This product is a DNA Polymerase coated with antibody, which is suitable for Hot Start PCR. There is no activity of this enzyme at room temperature, and the antibody can be inactivated rapidly at 70°C or above. This ensures that the enzyme is active only during PCR and prolonged heating or denaturation steps can be avoided.

BioLit® Cloning Vectors

A cloning vector is a small piece of DNA into which a foreign DNA fragment can be inserted. The insertion of the fragment into the cloning vector is carried out by treating the vehicle and the foreign DNA with the same restriction vector, then ligating the fragments together. There are many types of cloning vectors. Genetically engineered plasmids are most commonly used for this purpose.

BioLit® Ready-to-use DNA Molecular Weight Standards

BioLit DNA markers come in many useful ranges to cover most of the requirements of researchers and students. The markers are provided in a ready-to-use format for convenience and high reproducibility. We recommend a volume of 10 μL (~1 μg total DNA) per load to ensure that distinct, prominent DNA bands are observed even with a less sensitive UV transilluminator or in a less than optimal dark chamber. Users might be able to load a volume less than that recommended (without compromising results) if a high-sensitivity gel documentation system is available.

The markers have been carefully prepared under sterile conditions and stored in 10 mM Tris-HCl, pH 7.5, 1 mM EDTA and 1 mg/ml sodium azide and are unstained markers. Stocks will be stable for several months if properly stored frozen or even refrigerated.

BioLit® Ready-to-use Unstained Protein Molecular Weight Standards

BioLit protein molecular weight standards cover the useful range of protein sizes that a researcher or student requires for routine experiments. The recommended loading volume is 20 µl, giving approximately 5 µg of each protein sufficient for detection by Coomassie blue staining. The products are unstained markers. The proteins have been dissolved and denatured in the standard SDS-PAGE sample-loading buffer. Prepared under sterile conditions, these markers have appropriate additives to ensure long-term stability when they are stored in a refrigerator or freezer and even with brief exposure to room temperature. Although boiling is not required prior to loading, doing so will not affect results.

33203

Mid-Range 1 Protein Marker: 14-80kDa

This ready-to-use marker covers the useful range of protein sizes of 14 - 80 kDa and contains Bromophenol Blue as the tracking dye. It has nine bands of varying molecular sizes that a researcher or student requires for routine experiments.

Our gamma irradiated microcentrifuge tubes are highly recommended in the areas of Life Science, Industry or Chemistry for use in research and critical reagent packaging requirements.

Our tubes are designed with conical bottoms allowing for complete sample retrieval. Screw caps with O-rings guard against leakage by forming a positive seal against the rim of the tube. External ribs on the free standing microcentrifuge tubes allow for single-handed opening and closing when placed in racks with serrated holes. Screw Cap Microcentrifuge Tubes work with many automated systems. The O-ring is manufactured from durable ethylene polypropylene dimonomere compound.

Product Features:

- Capacity: 0.5 ml & 1.5ml sizes
- Plastic (Polypropylene) clear colorless tube
